

An International Conference on Neurosurgical Training and Research” was held in Munich from October 6 – 9, 1996, under the auspices of the EANS, and organized by H.-J. Reulen and H.-J. Steiger. Experts from different countries and neurosurgical organizations have collected information on the present status of resident training in neurosurgery and the mechanisms involved with the training. Various aspects, the recruitment process, the criteria used for selection, the contents and structure of a program, the continuous quality control, exposition to the art of research, fellowships and subspecialty training, etc. have been covered. The present book contains this material and thus provides a unique and comprehensive source of information on the complex of modern neurosurgical training. ... The beauty of this work is that it puts in one place the many varied aspects of a neurosurgical training program that one needs to be aware of ... should be required reading for the faculty of any academic training program as well as for others who may have a misconception of what residency training is ... an excellent book for any program director or active faculty member. It should be required reading for all faculty members before the next round of resident interviews ...”

Neurosurgery... well edited, published to a high standard and will naturally be of interest to those specifically involved in the areas of selection and training ... a useful text for aspirants to surgical training posts ...” British Journal of Neurosurgery
